Enterprise project, portfolio and resource management challenges

Today's organizations struggle to balance project requests against available resources, often lack a standardized method to accept, prioritize and execute them, and often encounter other challenges that include:

A lack of productivity and needless complexity as disjointed applications, email and point automation tools force workers to jump around between different applications.

A lack of visibility into timely data, hindering the ability to align projects with goals, manage competing priorities of distributed teams, and know who is working on what, when.

A lack of engagement and resistance to change when unfamiliar tools interrupt workers' daily routines. **A lack of predictability** to be able to eliminate surprises and make timely corrections.

A lack of collaboration and accountability built around a communication- and outcome-focused workspace that helps everyone work smarter.

A lack of resource management to be able to balance resources with demand and priorities, and make fact-based decisions with visibility into capacity to deliver.

The PMware Solution:

PMware[®] can help project-focused organizations of any size, in any industry, do more with less, balance resources against demand, set expectations, align and prioritize work and improve efficiency and profitability. It conforms to you, not the opposite.

Enterprise-wide Transparency

Remove the inefficiency of disjointed applications and provide a "single source of truth" so all roles and levels can make smarter, faster decisions.

Improved Portfolio Performance

Prioritize portfolios with objectives and make informed decisions based on real-time project status, financials and earned value metrics.

Role-based Interfaces & Personalized Dashboards

Deliver a familiar work experience that all roles can adopt and use successfully. Project managers familiar with MS Project can dive right in.

Streamlined, In-context Collaboration

Build team effectiveness with a single workspace to share and act on project-relevant information.

Centralized, Real-time Intelligence

Capture work data in real time and centralize it in a relational database for a 360° view of resources, schedules, tasks and financials.

PMware's enterprise-ready project and portfolio management (PPM) software provides visibility, predictability and accountability at all levels so you can plan, manage and control projects, resources and financials and collaborate in real time using a centralized, comprehensive, hosted or on-premise solution.

Designed by project management professionals to simplify complexity without sacrificing capability.

 **PMware**[™]

Visibility, Predictability & Accountability for All

One version of truth, for all to share

Projects Prioritized | Resources Optimized | Intelligence Centralized | Efficiency Maximized

Executives

- Get a clear snapshot of your portfolio of projects.
- Gain early insight into potential project slippage to take corrective actions in real time.
- Grasp resource capacity / demand by role to maximize utilization.

Program/Portfolio Managers

- Align project portfolio and resource allocation with strategic vision.
- Identify and select profitable projects; eliminate risky ones.
- Set priorities, objectives and constraints and monitor metrics.

Product Managers

- Balance and score projects and portfolios against KPIs with built-in monitoring.
- Enjoy easy click drill-down to source information for real-time status reporting.
- Use "what-if" scenarios to see the impacts of changing priorities.

Project Managers

- Gain visibility over your projects and build effective controls.
- Optimize project and resource planning across distributed teams using interactive Gantt's.
- Provide a central knowledge base of documents, issues and discussions for each project.

Resource Managers

- Identify / protect key resources, managing priorities and go / no go decisions at the portfolio level.
- Coordinate resources' work amongst competing project management requests.
- Gain control through visibility and approval of forecasted and actual resource work.

Internal / Outsourced Team Members

- Enjoy a role-based view of your world, which clarifies assignments / priorities resulting in less work.
- Identify and escalate issues early to minimize risk.
- Enjoy shared success through team visibility and collaboration.

What we do

Provide VISIBILITY INTO ...

- Project status, resources, issues, unplanned work, action items, risks and workflows.
- Impact of changes across the organization.
- Execution history – plan / actuals, financials, changes, documents, discussions – via a central repository.

Enable PREDICTABILITY ...

- Increase repeatability in planning.
- Automate / enforce processes to flatten learning curves, lower error rates and increase consistency.
- Examine "what-if" scenarios, compare predictions, and make trade-offs using live data.

Ensure ACCOUNTABILITY ...

- Synchronize teams on projects and tasks across geographies.
- Make all tasks and events self-documenting and auditable.
- Clarify responsibilities, proactively resolve conflicts and escalate issues.

Designed by project management professionals to simplify complexity without sacrificing capability.

Plan with Intelligence

Do more with less

Projects Prioritized | Resources Optimized | Intelligence Centralized | Efficiency Maximized

From start to finish, whether you're in product development, information technology (IT), the project management office (PMO) or the nonprofit sector, PMware empowers project-focused organizations of all sizes, in all industries, to first choose their projects with vision and the capacity to deliver, and then get their innovations to market or finish projects... faster.

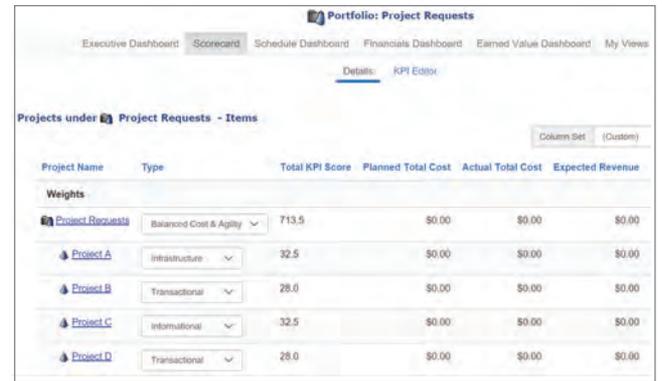

Demand Management & Portfolio Planning

Align portfolio of initiatives and projects with business strategy and capacity to deliver

A customizable project request form allows organizations to determine what data is important for selecting their projects. Any stakeholder can request a new project that then goes through an objective, centralized vetting process for auditing, prioritizing and tracking. Portfolio managers score and rank projects based on:

- Project objectives
- Extensive ROI analysis
- Capacity to deliver

The goal: Quickly and efficiently evaluate, score, prioritize, and advance the most promising ideas. Top-down and bottom-up portfolio planning ensure that your plans are always connected to real-time execution and resource capacity visibility.

Project Planning & Management

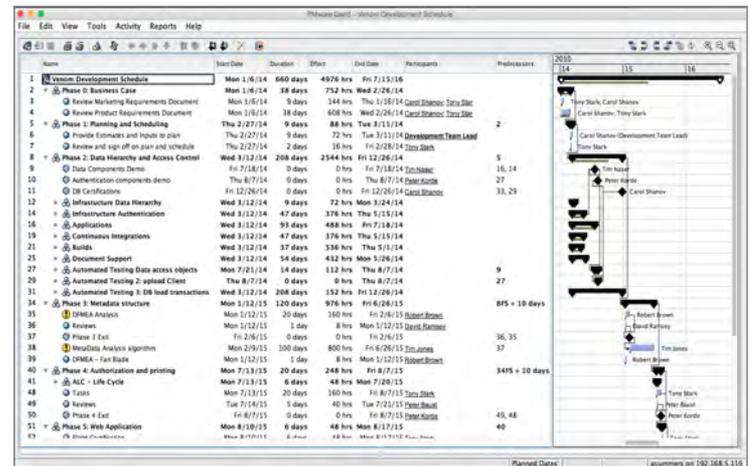

Roadmap your strategy for successful execution

A robust planning and scheduling engine lets project managers easily scope, size, estimate, schedule, staff and set a baseline for measuring success and progress of a project.

Keystroke compatibility to MS Project lets project managers jump in without a learning curve, using familiar Gantt charts with drag-and-drop interactivity. They can:

- Establish timelines with milestones, due dates, deliverables, and interdependencies
- Model the impact of changes to optimize schedules
- Easily import or export MS Project data as needed

Predictive, multi-user and multi-project execution technology lets you handle even the largest project plans dealing with inter-project dependencies, resource leveling and geographically distributed teams.

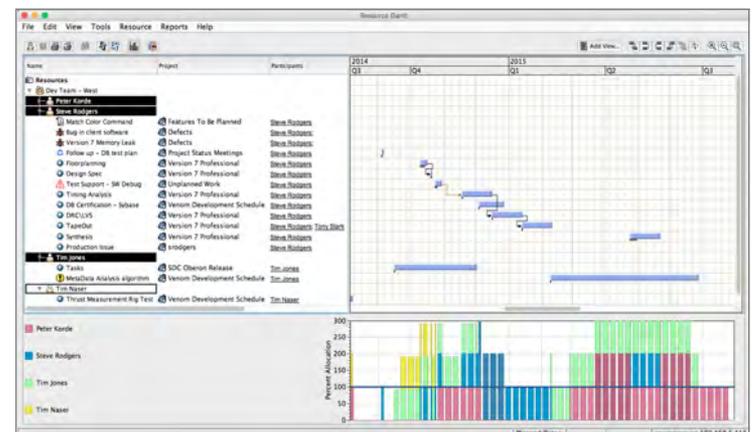

Resource Planning & Management

Put the right resources on the right projects

Select and deploy resources considering skillset, experience, availability, current / future workload and organizational goals. With a few mouse clicks:

- Identify overloaded and underutilized resources
- Run hypothetical scenarios to see impact of changes
- Resolve conflicts according to overall priorities
- Locate alternative skilled resources when necessary

Allocate your resources optimally and reallocate them quickly when needed, keeping the resources of your entire organization - even contractor resources - working on the right things at all times.

Execute with Precision

Empowered teams work confidently, perform as planned

Projects Prioritized | Resources Optimized | Intelligence Centralized | Efficiency Maximized

In-Context Collaboration & Work Management

Manage projects, focus resources and drive progress toward overall goals

After removing the distractions of email, spreadsheets and other disjointed applications, teams are now aligned on an integrated, communication- and outcome-focused workspace designed for team success. Role-based dashboards clarify assignments and priorities across projects, enabling everyone to work smarter. Real-time updates keep everyone in synch.

Team members can:

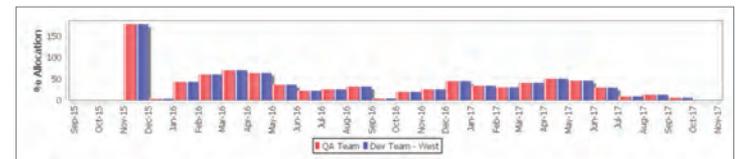

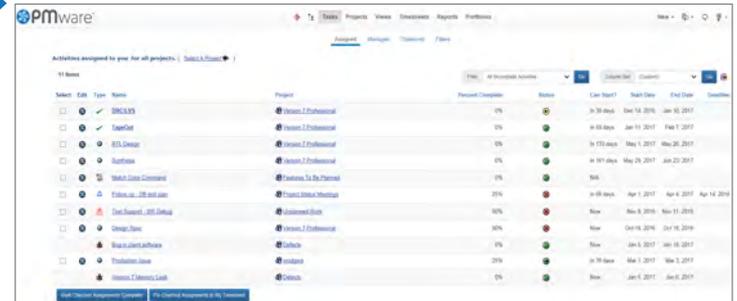

- View tasks / due dates
- Record progress
- Update status
- Discuss projects
- Identify / escalate issues
- Send internal messages
- Share files
- Track their time

PMware also manages the distractions – unplanned work requests, defects, issues, action items and even vacations – that divert teams from project activities.

Data captured in real time while executing projects and dealing with distractions provides immediate insight into resources, schedules, tasks and financials.

With comprehensive insight, you can:

- Manage issues, gates, and exceptions
- Manage multiple schedules and baselines
- Re-assign or add resources as needed
- Re-prioritize activities to meet objectives

Centralized Communications & Documents

Communicate within the system to create efficiency and an audit trail

Never again dig through emails to find relevant information. PMware keeps a knowledge base and history of documents, files, issues and discussion threads for each project, complete with a full-text search engine. Collaborate with internal and external stakeholders, such as clients or partners, to edit documents and manage the workflow approval process.

Communicate in context of either a task or the overall project:

Upload documents and references and send links to team members

Create discussions and send to specific people or everyone in the project

Associate documents to other libraries such as MS Sharepoint

Simply, PMware enables you to:

Choose projects with vision and the capacity to deliver, accurately estimate and plan work, assign staff and other resources, collaborate on work, achieve financial control, identify and mitigate project risks, and manage a project lifecycle from request to delivery.

Manage with Insight

Maximize efficiency & profitability

Projects Prioritized | Resources Optimized | Intelligence Centralized | Efficiency Maximized

Portfolio Management

Make decisions and early corrections to maximize efficiency and profitability

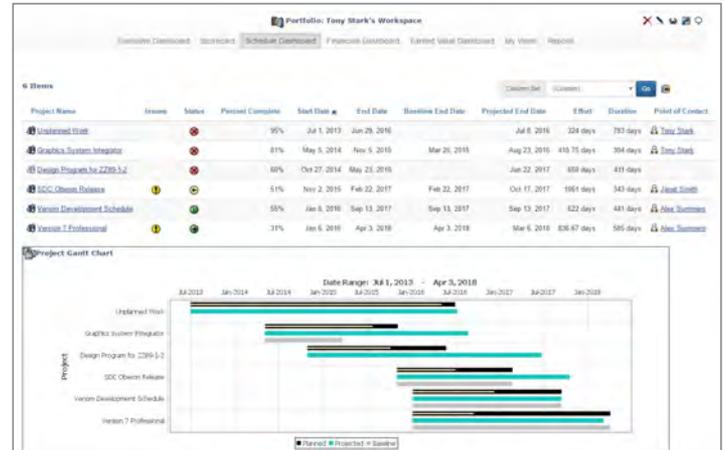

Changes in course are inevitable, and PMware enables proactive vs. reactive change management. Get early warning to prevent unwelcome surprises.

With built-in status monitoring and live data, you'll continually analyze and balance projects, portfolios and resources against Key Performance Indicators (KPIs):

- Measure the health of projects, financials and resource allocation.
- Use "what if" scenarios to see how changes will impact schedules, costs and staffing.
- Identify when projects are moving off track.

The goals:

- Make timely corrections to minimize risk, reduce loss and optimize ROI across your portfolio.
- Respond to fast-changing priorities and unforeseen changes in your company and industry.
- Automatically update stakeholders when changes affect them so they can take action sooner.

Analytics & Reporting

Provide comprehensive project management intelligence to all roles

From executives to individual contributors, PMware provides easy access to the analytics you need to make informed decisions. Simple, flexible dashboards, views and reports leverage live data to provide insight. View up-to-the-minute status on:

- Project schedules
- Tasks
- Resource loads
- Overdue milestones
- Deadlines
- Critical path overviews
- Project effort comparisons
- Risk versus reward

Create reports and graphical views including bubble charts, pie charts and more. Whatever you need to see at a moment in time, PMware can provide it.

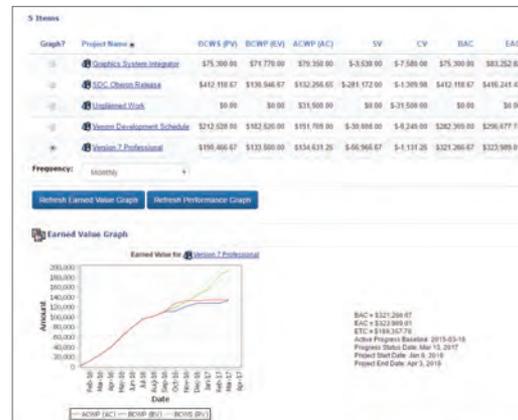

Financial Management

Track costs and manage the bottom line

PMware helps you budget and forecast planned costs and benefits. Compare planned and actual costs across both labor and capital to understand the relationship among schedules, delivery and total cost.

- Analyze the earned value of your projects and portfolios.
- Monitor time, budgets and expenses for billable and non-billable activities.
- Track labor costs by either role-based or individual billing rates.
- Assign billing codes for accurate accounting.

Why PMware Delivers

Easy in-house validation

We encourage you to evaluate PMware with your people and processes to ensure it performs in your environment with our no-nonsense validation phase.

Rapid deployment and time to benefit

Simple deployment options allow you to introduce PMware at any stage in your process – no big-bang implementations. You'll realize results in days to weeks, not months or years like you may experience with other applications.

Flexible and scalable

Powerful enough for company-wide implementation, yet flexible enough to start small, PMware can grow with you. Implement it in a small group or project, and then expand at a pace that's comfortable to your organization.

Conforms to you

PMware adapts to any environment because it's platform, process and industry agnostic. Supports all methodologies – Waterfall, Agile and more. Provides fully configurable business rules and workflows, and our SmartTasks[™] feature lets you quickly map your existing processes. Even jump-start your process with Six Sigma, CMM and ISO990x configurations.

Easy integration

An open architecture with robust APIs can easily integrate with applications you use: MS SharePoint, Agile tools like Jira, and ERP (like PeopleSoft and SAP), HR, and CRM systems. Bi-directional support for MS Office also preserves existing information.

Ease of use and adoption

Intentionally designed to leverage familiar work paradigms, PMware is easy for all roles to adopt and use successfully. Project managers familiar with MS Project are productive immediately, and their success rallies others. A collaborative platform designed for team success captures status and issues automatically while teams execute projects.

Two interfaces and mobile access

Project managers using Gantt charts need more power than an online interface provides, so we offer a power client for their laptops. Executives and end users use an online interface. Mobile access is easy using any tablet and any browser.

Flexible delivery and pricing models

PMware can be installed on premise, or hosted in the cloud. We offer either a perpetual or SaaS pricing model.
